Subject Index to Volume 6

activity, 268-269
adipose tissue, 219-233, 261-270
AEP, 523-524
aerobic power, 415
age, biological, 497-522
age identity, 283-298
animal models
  atherosclerosis, 249, 255-256
  gerbils, 249-260
  nutrition and aging, 230-231
  obesity, 261-270
  periodontal disease, 249, 255-256
  rabbits, 244-245
  rats, 219-231
  stroke, 249, 255-256
astrocytes, 507-508
athletic performance, 407-416
attention, 160
attitudes towards elderly, 299-313
autonomic responses, 160
avoidance conditioning, 175-180

biological age, 497-522
body mass, 219-233
body weight, 417-430
  age distribution of, 417-430
  diet, 417-430
  obesity, 261-270, 420-430
  stochastic analysis, 417-430
  survival, 417-430

cardiovascular function
  cognitive tests, 49-83
  reaction time, 70-75
cautiousness, 463-473
cell doubling potential, 509-510
cerebral blood flow, 71-72
cerebral chemistry, 71-72
  intellectual performance, 83-87
  metabolism, 69-109
  personality variables, 90
Choice Dilemmas Questionnaire, 149-157, 463-473
choice, latitude of, 357-365, 367-384
  staff perceptions, 367-384
choice reaction time (CRT), 563-567
chromosomal aberrations, 506
cohort size and biological age measures, 509-515
coincidence-anticipation accuracy, 451-462
cold exposure, 3-12
collagen, 508
collagen infiltration, in pineal cells, 206-211
communications
  computer-based, 126-128
  industrial society, 125-128
computers, 125-135
congeneric models, for attitude measures, 299-313
convergent validity, risk taking tests, 463-473
CTA paradigm, 113-123

diet
  ad libitum feeding, 243
  antioxidant, 417-430
  body weight, 417-430
  growth, 219-233
  mortality, 219-233, 417-430
  obesity, 219-233
  toxic, 417-430
disease and biological age, 497-522
dopamine, 329-339

EEG, 523
electrodermal response (EDR), 159-174
estradiol, 329-339
estrous cycle
  in mice, 317-328
  in rats, 547-554
estrogen, 547-554
event related potential (ERP), 523-545
evoked potentials, 523-545
extinction, 113, 118-120

factor analysis, Q-type, 69-109

gamma-aminobutyric acid, 61-67
gerbil, Mongolian, 249-260
gliocyte, 191
glomerular basement membrane, 504
granular endoplasmic reticulum, 189-211

hearing ability, 87, 90
heart rate, 159-174
historical events, memory for, 47-60
housing conditions, rats, 219-233
husbandry
  gerbils, 250
  rabbits, 237-244
  rats, 219-233
hypertension, 69-71
  reaction time, 91-95

spontaneously hypertensive rats, 267
hypothalamic lesions, 265, 267
hypothalamic-pituitary-ovarian axis, 323-325, 329-339
hypothalamo-pituitary system, 3-12

imagery, 185-188
individual differences, 482-484
intelligence, 70-71

L-DOPA, 547-554
learning
avoidance conditioning, 175-180
conditioned taste aversion, 113-123
passive avoidance, 113-123
LH-releasing hormone, 329-339
life satisfaction, 365-384
lithium chloride, 113-123
lipofuscin, 507
longevity, 417-430
long term memory, 47-60
luteinizing hormone (LH), 329-339, 548-554

memory
abstract sentences, 431-443
autonomic responses, 159-174
depth of processing, 445-449
historical events, 47-60
instructional effects, 341-348
integration, 431-443
levels of processing, 341-348
primary versus secondary, 431-443
recall versus recognition, 341-348
recognition, 341-355
semantic, 431-443
versus non-semantic, 341-355, 445-449
short-term, 271-281
verbal versus spatial information, 271-281
methodology
attitude measurement, 299-313
biological age assessment, 497-522
latitude of choice, 363-364
Q-technique, 69-109
MgTC (magnesium thiazolidine carboxylate), 418-430
mice, 417-430
age and weight distributions, 417-430
CBF_1, 385-391
C57BL/6J, 417-430
Peromyscus leucopus, 317-339
mitochondria, reticulated, 189-211
models of development, 475-487
morale, 357-365
morbidity and biological age, 502-503
mortality
biological age, 500
gerbils, 250-256
rabbits, 237-245
rats, strain comparisons, 219-233
motion sickness, 555-561
motor performance, 451-462

neural mechanisms and ERPs, 538-541
neuronal cell count, 504-506
neuropsychological test performance and hypertension, 71
norepinephrine, 329-339
nuclear inclusions, in pineal cells, 191, 206
nuclear invaginations, in pineal cells, 191, 206
nutrition, 243
obesity, 268-269

obesity, 261-270, 420-430
open field activity, 175-180
ovaries, 317-328, 329-339

pacing, metronome, 393-398
passive avoidance and B_6 deficiency, 61-67
perception, inconspicuous words, 137-147
physiological capacitance, 508
pineal gland, 189-211
pinealocytes, 189-211
piracetam, 175-180
pituitary, 3-12
polypathy, 498
preparatory interval, 13-27
Primary Mental Abilities Test, 71
privacy, desire for, 357-365
progesterone, 317-328, 329-339
pyridoxine, 61-67

Q-technique, 69-109

rabbits, 235-248
rats, 261-270
Fischer 344, 61-67, 113-123, 219-233 262-265
Long-Evans, 3-12, 175-180, 219-233
Sprague-Dawley, 189-211, 219-233, 547-554; 555-561
Wistar, 219-233

reaction time, 13-27
  cardiovascular problems, 75-76
  expectancy, 563-567
  hypertension, 91-95
  memory, 445-449
  preparation for, 13-27
  transit-signal method, 15
recall of abstract sentences, 431-443
recognition
  abstract sentences, 431-443
  autonomic responses, 159-174
  emotional versus neutral words, 159-174
  inconspicuous words, 137-147
reliability and risk taking tests, 463-473
risk-taking, 149-157, 463-473
Risk Taking Questionnaire, 463-473
risky shift phenomenon, 149-157
running performance, 407-416

saccharin, 113-123
Satz-Mogel WAIS, 181-184
self-concept
  age identity, 283-298
  latitude of choice, 367-384
semantic differential
  age identity, 283-298
  attitudes towards elderly, 299-313
serotonin, 3, 61
17 β-estradiol, 317-318
sex differences
  memory, 49
  perceptio, 144-145
  reaction time, 23
sexual behavior in mice, 385-391
short term memory, 271-281
socioeconomic status, 32-36
stage models of development, 475-487
stimuli, irrelevant, 393-398
strain comparisons
  gerbils, 249-250
  growth characteristics, 219-233
  mortality, 219-233
stress, cold exposure, 3-12
subjects
  institutionalized, 367-384, 393-398
  nursing home, 357-365
  psychiatric, 181-184

taste aversion, conditioned, 113-123
T-cell mitogens, 508-509
television, 29-45
temperature, body, 6
testosterone, 317-328
tests
  Halstead-Reitan Battery, 71
  PMA, 71
  Satz-Mogel WAIS, 181-184
  WAIS, 70-71
theories of development, 475-487
theory, formal aspects, 475-487
thymus weight, 506-507
thyroid, 3-12
thyroidectomy, 3-12
thyrotropin, 3-12
thyroxine, 3-12, 509
time estimation, 393-398
toxicosis, 113-123
triiodothyronine, 3-12
TSH, 3-12

uterine histology, 317-328

vitamin B_6, 61-67
vitamin E, 417-430
Vocabulary Risk Test, 463-473

WAIS, 70-71
weight
  growth over life span, 219-233
  stochastic analysis of, 417-430
words
  emotional versus neutral, 159-174
  inconspicuous, 137-147

Zucker fatty rat, 265-267
